

Module 15

Search and organize
repository history by using GitHub

Agenda

GitHub Foundations Part 1

- 1 Introduction to Git
- 2 Introduction to GitHub
- 3 Introduction to GitHub's products
- 4 Configure code scanning on GitHub
- 5 Introduction to GitHub Copilot
- 6 Code with GitHub Codespaces
- 7 Manage your work with GitHub Projects
- 8 Communicate effectively on GitHub using Markdown

GitHub Foundations Part 2

- 9 Contribute to an open-source project on GitHub
- 10 Manage an InnerSource program by using GitHub
- 11 Maintain a secure repository by using GitHub best practices
- 12 Introduction to GitHub administration
- 13 Authenticate and authorize user identities on GitHub
- 14 Manage repository changes by using pull requests on GitHub
- 15 Search and organize repository history by using GitHub
- 16 Using GitHub Copilot with Python

Introduction

In this module, you'll learn how to search and organize repository history by using filters, blame, and cross-linking on GitHub.

By the end of this module, you'll be able to:

- Find relevant issues and pull requests.
 - Search history to find context.
 - Make connections within GitHub to help others find things.
- 

How to search and organize repository history by using GitHub

- **Search Methods:** Use global search for comprehensive results across all of GitHub, and scoped search for specific repository tabs.
- **Starting Point:** Search the project's repository for key terms like "sidebar" to find relevant history and context for fixing issues.

The screenshot shows the GitHub search interface with 6,510 repository results. On the left, there are filters for Repositories (6K), Code (74M+), Commits (2M), Issues (303K), Discussions (37, Beta), Packages (34), Marketplace (0), Topics (86), Wikis (34K), and Users (19). Below these are language filters: JavaScript (1,587), HTML (940), PHP (906), and CSS (765). The search results list includes:

- kongnanlive/SideBar**: 859 stars, Java, Updated on Mar 14, 2017. Description: 全新的快速索引导航栏，联系人字母排序侧边栏。
- codrops/SidebarTransitions**: 1.5k stars, CSS, Updated on Mar 16, 2017. Description: Some inspiration for transition effects for off-canvas navigations.
- BlackrockDigital/startbootstrap-simple-sidebar**: 1.6k stars, HTML, MIT license, Updated on May 3. Description: An off canvas sidebar navigation Bootstrap HTML template created by Start Bootstrap. Tags: html, bootstrap, open-source, bootstrap4, free, bootstrap-4, bootstrap-theme, bootstrap-template.
- abouolia/sticky-sidebar**: 1.8k stars, JavaScript, MIT license, Updated on Apr 23. Description: Pure JavaScript tool for making smart and high performance sticky sidebar. Tags: bower, scrolling, performance-sticky-sidebars, jquery, jquery-plugin, javascript, sticky-sidebar.

How to search and organize repository history by using GitHub (Blame command)

- **Git Blame Command:**
Displays the commit history for a file, showing who made changes and when, helping to track down contributors for input.
- **GitHub Blame View:**
Extends git blame with a robust interface, making it easier to locate subject matter experts by viewing commit history.

How to search and organize repository history by using GitHub (Autolinked references)

- **Autolinked References:** GitHub offers shorthand syntax to automatically create links for issues and commits, making it easier to cross-link items.
- **Manual Linking:** Use the interface to manually link pull requests or projects to issues, enhancing collaboration and context sharing.

Exercise - Connect the dots in a GitHub repository

What you'll learn:

- Find relevant issues and pull requests.
- Search history to find context.
- Make connections within GitHub to help others find things.

What you'll build:

Repository with existing commits, duplicated issues, and a content defect to be fixed.

In this exercise, you will explore:

- Resolve a duplicate issue.
- Find a commit in history.
- Fix a broken sidebar.

Start course

Summary

In this module, you learned to search and organize repository history by using filters, blame, and cross-linking on GitHub.

You learned how to:

- Find relevant issues and pull requests.
- Search history to find context.
- Make connections within GitHub to help others find things.

End of presentation
